WHOLESALE CATALOG

PLANT THE YEAR ROUND

1943

Beaumont

Texas

TO OUR FRIENDS OF THE TRADE

OUR PERSONAL MESSAGE:

This Wholesale Catalog is being sent to you at this time for general reference on the Trees, Shrubs, Palms, Deciduous Flowering Trees and Shrubs, Vines, etc. which we have available for our customers at the present. It represents a very nice selection of choice materials and Specimen stock of a variety as especially required for the better landscape planting of the Southwest.

While conditions still remain somewhat uncertain in our line of business, we expect to continue to serve our long line of customers the best we can under existing conditions. Labor and materials as used in the preparation of nursery stock for shipment are scarce and difficult to secure, but we are trying to minimize these along with the pricing of our stock.

There may be occasion to make some changes in these prices anytime, because Labor, Burlap, Nails and String, all of which enter into pricing trees and shrubs, are on the increase and difficult to secure. We will however do our utmost to hold the prices in line and furnish good quality material prepared in the usual manner for shipment.

We continue the practice of grading our Trees and Shrubs by the American Association of Nurserymen's Standardized System of Grading, because we think it is the only "fair way" of grading Nursery stock and giving all our customers a square deal. This Catalog covers both XX Standard Quality, and XXX Extra Heavy Quality Trees and Shrubs.

The usual "GRIFFING WELCOME" awaits you at our Nurseries. Let us take care of your requirements with good Quality Nursery Stock.

W. C. Griffing
GRIFFING NURSERIES

PRICE LIST FOR TRADE ONLY

This Catalog is intended for members of the Trade (Nurserymen, Landscape men, Dealers, Florists) who buy for resale plant materials. Should it fall into the hands of a Retail customer, it will be appreciated if it is returned directly to us.

HOW WE BALL

We do not Spade the Balls Out and tie burlap around the Loosened Soil, nor do we Drive a Cylinder around to cut roots Too Short, but the Soil is Solid, never cracked and Size of Ball to conform to the Root System.

A FEATURE ABOUT GRIFFING'S B&B NURSERY STOCK YOU MUST NOT OVERLOOK

Our Great Success in transplanting Trees and Shrubs safely at all Seasons may be largely Attributed to our Wonderful Balling Soil. There is no Other Just Like it. We have the soil that is "just right" for Balling and Burlapping. The Ball is Cut out in one solid piece, often compared to Slicing a "piece of cheese."

CAUTION

Never lift Trees and shrubs by the Top. Lift the Ball Itself by grasping it with both hands around the ball, or Larger Balls by making a Sling of Burlap, so as not to loosen Roots in the Ball.

ASSOCIATION MEMBERSHIP

To further the interest of the Nursery and Landscape Development and keep posted on affairs of interest to the Trade, we maintain membership in the following Trade Associations:

American Association of Nurserymen, Landscape Nurserymen's Association of the American Association of Nurserymen, Beaumont Florists & Nurserymen's Club, Beaumont Chamber of Commerce, Louisiana State Horticultural Association, Inc., Texas Association of Nurserymen, Texas State Florists' Association.

Effective December 1st we are advised an emergency increase of 3% will go into effect above regular rates.

WEIGHTS OF B&B NURSERY STOCK

Weights given in this Price List are the approximate weights on our XX Quality of Nursery Stock, which is our Standard Quality. Weights on the XXX Heavy Quality will run about 25 per cent higher than the weights stated. Specimens, which we do not list, will oftentimes run Fifty (50) per cent more than the XX quality. **NOTICE:** Weights are also based on the average dry soil when the plants are dug, and when extremely wet, the weights will naturally be increased.

BROADLEAF EVERGREENS

Modern Home-Plantings cannot be considered as complete—or hardly begun—if they do not contain a liberal supply of Broadleaf Evergreens. They are needed for the green foliage which gives color all the year, especially in winter when warmth and color are demanded. There is need for them in all plantings, particularly in the Outdoor Living Room where they lay claim in everyday beauty.

We have an unusually large collection of Broadleaf Evergreens. The plants are frequently transplanted, carefully pruned, and given plenty of space to develop into stately, vigorous and healthy specimens.

AZALEA

Azaleas which were used sparingly in Landscape plantings over a period of years, in the Southwest have come into prominent place in all types of plantings. With their Evergreen foliage, and gorgeous blooms in the early Spring Season, no planting is considered complete without them.

All Azaleas require an acid soil, hence leaf-mold or Peat moss for mulching the roots should be added over the surface of the plant beds Lime and alkali conditions of soil require special preparation with new acid soil.

There are no more beautiful Flowering Shrubs than the Azaleas for the Gulf Coast area.

Massive group of Formosa Azaleas in full bloom.

Avenue of Azaleas
A gorgeous sight in full bloom.

HOW TO CULTIVATE AZALEAS

CULTURAL DIRECTIONS: To get the best results, Azaleas should be planted in partly shady locations, and particular attention should be given to protecting them from the hot sun in summer. The soil should contain an abundance of leaf-mold, peat, and sand, and should be well-drained. Azaleas will not grow in limestone soil.

Mulching with decayed leaves, preferably those of hardwood trees, is a distinct advantage. Peat is also a splendid mulch for Azalea beds, as it retains the moisture. Applications of aluminum sulphate may be necessary when leaves become yellow, which indicates that the soil has become impregnated with lime.

CAMELLIA

JAPONICA

Camellias are sometimes called the "Aristocrats of Southern Gardens." They are easily grown in the South, and their rich, glossy foliage and colorful flowers make them unusually attractive. There are many named varieties, but not all are desirable. The flowers are produced during the mid-winter when no other flowers are found in the garden, bringing increased admiration for this plant.

CAPE JASMINE

GARDENIA

One of the most commonly known Evergreen Flowering Shrubs in the Gardens of the South. Very popular for their fragrant, white flowers. Does not like lime or alkali soils. Prefers neutral or acid soils.

Blossoms of the Gardenia are most attractive in the Garden, as well as sweet scented.

DWARF SPREADING

Gardenia radicans prostrata nana

Spreading habit. Small, pointed leaves about one-half inch wide glossy green. Miniature Gardenia flowers, fragrant and snowy white; blooms early in the Spring and occasionally during the Summer. Grows better in full sun, but will grow in partial shade. Used for low groups and borders.

B&B	4 ft.	175 lbs.	1.10	1.90
B&B	5 ft.	290 lbs.	1.60	2.90

FORTUNE (Fall Blooming Type) Gardenia fortunei

Compact, bushy habit. Dark green foliage. More hardy than the Florida. Blooms are medium size waxy white, and sweet scented, appearing in the Spring, and at intervals during the Summer. This is the variety so much in demand for the Gardens of the South, as well as in the North, when given proper protection.

Class	Min. Ht.	Apex. Wt.	XX	XXX
B&B	15 in.	30 lbs.	\$.60	\$.90

B&B	2½ ft.	90 lbs.	1.40	1.60

ELAEAGNUS

No group of Broadleaf Evergreens have grown more in favor during the past few years than the Elaeagnus Family. A most versatile Shrub, for foundation plantings, groups, borders or hedges. To our knowledge, no other shrub grows better than Elaeagnus in shady locations, as well as in full sun. Small white flowers, followed by small yellowish-red edible fruit.

Note—All Elaeagnus Cutting Grown.

BROADLEAF

E. pungens macrophylla

Leaves are large and pointed, upright grower, one of the best large fast growing types to be planted in the back-ground of groups.

FRUITLAND

E. pungens fruitlandi

Very similar to Broadleaf, only it has more open weeping habit of growth.

Class	Min. Ht.	Apex. Wt.	XX	XXX
B&B	2 ft.	70 lbs.	\$.80	\$1.10
B&B	2½ ft.	80 lbs.	1.10	1.60
B&B	3 ft.	90 lbs.	1.60	2.20
B&B	4 ft.	150 lbs.	2.20	2.75
B&B	5 ft.	200 lbs.	2.75	3.50

DWARF THORNY

E. pungens nana

Semi-spreading compact habit. This variety is exceptionally good when planted under windows where it can be constantly sheared, making a wide spreading growth.

Class	Min. Sprd.	Apex. Wt.	XX	XXX
B&B	2 ft.	90 lbs.	\$1.10	\$1.60
B&B	3 ft.	110 lbs.	1.60	2.20
B&B	4 ft.	150 lbs.	2.20	2.75
B&B	5 ft.	200 lbs.	2.75	3.50

This specimen is typical example of our field grown Cutting-grown Elaeagnus, which are so useful in general landscape plantings. Use them for shady locations as well as in full sun.

GRIFFING'S COMPACT

E. Griffing Hor. var.

New and unusual variety, a sport of the Fruitlandi discovered by us in 1934. Preferred to all other varieties of Elaeagnus by many customers and Landscape men because of its close compact, attractive growth. Semi-spreading compact habit, leaves of medium size and quantities of small branches makes it very attractive and good for clipped hedges or Specimen plants.

ROSEDALE

E. Griffing Hor. var.

A new sport. Small leaves, upright growth, many small branches, where used in shade for Hedges with its new bronze leaves and brownish bark makes excellent contrast color in plantings.

SIMON

E. pungens simoni

USE GRIFFING'S STANDARDIZED GRADED TREES

HOLLY - *Ilex*

There are many kinds of Hollies, some make Trees, others shrubs—all are valued for their berries. However, all the Trees or plants do not bear berries. Pistillate ones will bear if Staminate ones are grown close to them.

The Hollies are beautiful plants at all times, some varieties making large trees, and others small compact shrubs. Being clothed in hard, shiny, irregularly formed foliage, they hold their own among other Trees and Shrubs but in Winter, when loaded with beautiful berries, they are the glory of the garden. The Hollies are adapted to many uses—as individual specimens, in groups, foundation and border plantings, and formal clipped hedges. The Yaupons grow readily in the shade, and are not affected with heat or drouth conditions.

HOLLY - *Ilex*

NOTICE: Both pistillate (Berry-bearing or Female) and staminate (Non-berry or Male) types. The Pistillate types will bear berries only when properly cross-pollenized by the Staminate type. There should be one staminate for every five pistillate.

AMERICAN HOLLY

Ilex opaca

Tall, pyramidal growth with horizontal branches. Large, rounded, glossy dark green leaves with spines. Bears masses of bright red berries in winter. Grows both in shady locations, and in full sun. Thrives best in sandy loam soil. This is the beautiful Holly used for holiday decorations. In addition to this, it is worthy of far more attention from Landscape Gardeners than it usually receives.

YAUPON HOLLY

Ilex vomitoria

This is undoubtedly the best of the native shrubs. It can be kept sheared resembling the fine-leaved Boxwood. Nursery grown, root pruned, balled from our Beaumont Balling Soil. Compact growth, highly improved over those grown in the woods. We have sheared some into Globes, Cones, Squares and Pyramids. We also grow blocks for Hedge Purposes and constantly headed back while small makes low compact hedges to start with. Umbrella shaped trees or compact bushy shrubs. The finest shrubs for compact hedges, sheared or unsheared. The young stems are light brown, turning to a light gray. The leaves are small, lustrous green above, and paler beneath, and cling from two to three years. The transparent red berries are very outstanding. This variety of Holly grown in all soils, and in shady locations, or in the open sun. Makes the best Evergreen Hedge. Also, useful as specimens, screens, accents in foundation plantings; in fact, anywhere in the Landscape Planting. They can be pruned to any shape or size, and with little work, look well at all seasons. Immune from all known kinds of insects and fungus diseases.

Upright growth, good for mass and foundation planting, unsurpassed as a lawn specimen or shrub to alternate with street trees or beautify a boulevard or park. If tops freeze back in more northern locations it will come out from the roots with luxurious growth.

We have taken special care to select accurately and list according to description, so that a customer can know exactly what color Oleanders he is getting. As novelties for your home grounds, you will find these to be most beautiful.

CARDINAL

Hardy Red

Nerium

Upright branches, bushy habit. Long, narrow leaves. This is an unusual shade of pure Red. Flowers produced in clusters during the summer. This variety withstands freezing temperatures. Good for masses, heavy branched specimen, and street planting.

PODOCARPUS

One of our most attractive trees or shrubs. The fruit is very peculiar, as it has a blue stem with a red ball at the end. Can be planted at the water's edge without injury from salt sprays. One of the most versatile trees grown, for borders and groups, or in individual specimens.

BROADLEAF YEWE

Podocarpus macrophylla

Beautiful evergreen, upright branching shrub or small tree. Rather broad leaves, light green when young, dark green when mature.

LITTLELEAF YEWE

Podocarpus microphylla

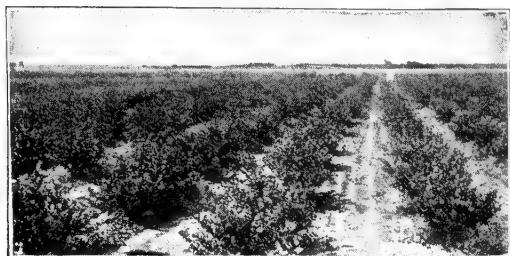

Similar to macrophylla, except bush is more compact in form, and more slender growth; leaves are more narrow, and are green from youth to maturity.

PRIVET

LIGUSTRUM

This is another large family with various shaped leaves, branches and color, etc. Largely used throughout the South. All varieties have masses of white flowers followed with black berries.

Field of Griffing's Waxleaf Privet

BLACKLEAF

L. lucidum nigrifolium

Distinct black-green foliage. Most hardy of the Ligustrum group; very thick and glossy shrub.

CRINKLYLEAF

L. lucidum recurvifolium

A descriptive name from its twisted or crinkly leaves. Its long arching branches with dark green foliage makes it very attractive; much harder than most of the lucidum types.

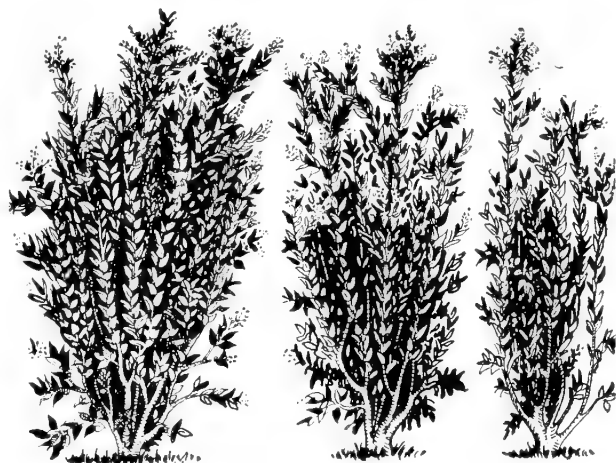

WAXLEAF, GRIFFING'S

L. lucidum compactum

This is the best bushy, compact evergreen shrub along the Gulf Coast. We have continued propagating from cuttings this variety from the original plants. Its low compact growing type is decidedly different from a lot of Waxleaf.

CONIFEROUS EVERGREENS

Needle-leaved and cone-bearing trees, including many varieties, among which are the Arborvitae, Cypressess, Cedars, Junipers and Pines. Conifers when properly placed add more distinction as well as age and beauty to a planting. Their growth is so slow that they never outgrow their places. The lower limbs of Conifers should always be allowed to remain, for in removing them, the natural beauty is destroyed.

ARBORVITAE

THUJA ORIENTALIS

There are two types of Arborvitae, which are known as Occidental and Oriental. The Occidentalis are generally not suited for the Southern States, while the Orientalis or Chinese types all do well in the South. The Oriental type is also classed as "Biota," which is now unapproved.

USE GRIFFING'S STANDARDIZED GRADED TREES

OAKS-Quercus

Nursery grown Live Oak Trees live and thrive under all conditions when the Trees have been root-pruned and properly Balled from the right kind of balling soil and pruned properly as they are dug.

Live Oaks are rapidly becoming the most popular Shade Tree in the South, because they are evergreen, and because they make such a shapely tree for any purpose they may be used. Our Spanish type of Live Oaks are the fastest growing variety but even then it takes Several years for a small tree to grow large enough to give shade. There is nothing more beautiful than the true "Spanish" Live Oak. This type has thick dark green, oblong, pointed leaves that glisten in the sunlight, the under side being a grayish-green color.

OAKS-Quercus

Our Live Oaks have been regularly root pruned, and grown in our black heavy Beaumont Balling Soil, they have a compact root system, which makes the transplanting of them more expensive but much more successful than forest-grown trees.

Experimental reports have been made by Experiment stations after several years of study on suitability of soils for growing Live Oak trees. The tests show that they will grow on any kind of soil equally as well as on another, whereas deciduous Oaks can only be grown on sour soil.

Fast Growing Evergreen Spanish Live Oak

LIVE OAK (Spanish Type) Quercus virginiana

We have the complete stock from Acorns gathered in Florida from the choicest isolated groves in existence, so there is not a chance of hybridizing. This true type of fast-growing Oaks are destined to revise the idea that Live Oaks are a slow growing tree, much different from the ordinary native Live Oak in Louisiana and Texas, which we call the Scrub Live Oak, but takes too long to grow. Always clean, rich foliage. Very straight bodies. From young seedlings we trim to single stem in center, not allowing forks even on our 20 foot trees. In centuries to come these forked trees may split open and ruin the tree.

USE GRIFFING'S STANDARDIZED GRADED TREES

DECIDUOUS SHRUBS

The greatest majority of brilliant flowering shrubs and other ornamental varieties lose their foliage in winter (Deciduous). For gorgeous color displays they should be promiscuously used in landscape plantings. Their winter barren period is brief in our Southern section and the color changes in autumn make the absence of leaves in winter less lamented. Usually flowering shrubs are best planted in groups of from 3 to 20 or more. They are far more effective in this way than planted singly. Put enough of one kind to make a little picture in the landscape when in bloom or when the leaves take on the autumn color, or the fruit and berries have ripened. With enough evergreens to keep the planting cheerful in winter, Deciduous shrubs should be generously used in the South.

Pruning should be done immediately after blooming season, cutting the fading blossoms away. Pruning too late or when dormant will sometimes interfere with blooming the following season.

Flowering shrubs can be handled when dormant with bare roots. Better results are usually had with B&B plants. For early or late planting and even mid-summer plantings, B&B shrubs will grow luxuriantly. Try them and see what excellent results you obtain.

CRAPE MYRTLE

LAGERSTROEMIA INDICA

We grow most of ours in Balling soil—it pays to ball them. Write on order if single stem, many stems from ground or if bushy plants are wanted.

BALLED and BURLAPED CRAPE MYRTLES transplant with unusual success from our Balling soil, to live, grow, and blossom heavy the first season. Why not give immediate effects his way? With the wide variety of colors to select from, they can be used extensively in the Landscape. B&B Crape Myrtle transplant into cold climates with success, whereas bare-rooted plants winter kill.

The favorite Flowering Shrub of the South. A hardy and heavy bloomer; it paints the landscape in the summer months with its brilliant blossoms in tones of crimson, red, pink, purple, and other shades. Frequently termed the "Lilac of the South." Inter-planted with evergreens, beautiful effects are obtained. Massed in groups of any size, a display of color unrivaled is had the first summer. The most generous usage and the demand of recent years indicates its great popularity.

PRUNE EVERY WINTER—For best results Crape Myrtles should be cut back to one foot of the ground when planted. (By using big sizes you get better root systems.) Then every year thereafter prune them back to within 2 to 4 inches where they were the year before. In this way you get much larger flowers, thick branches, and dense foliage.

Interplanted with evergreens, beautiful effects are obtained. Massed in groups of any size, a display of color unrivaled is had the first summer. The most generous usage and the demand of recent years indicates IT'S GREAT POPULARITY.

GRIFFING'S QUALITY ROSES

For the convenience of our Wholesale Trade who call on us for best selection of Roses along with their entire requirements of Trees and Shrubbery, we list this selection of roses to accomodate their orders and furnish them with a full choise selection.

ROSES

We have two varieties to take the place of Everblooming Flowering Shrubs, for Hedges, or in low groups.

AZALEA ROSE

Flowers much larger than the usual Baby Roses. Clusters large on good strong stems, growing about 2 ft. high. A free and vigorous grower and abundant bloomer. Color, a bright rose pink.

LOUIS PHILIPPE ROSE

The foliage is always bright and green. The bush is a very strong grower of bushy habit and with bright red flowers, hanging in clusters over the bush at all seasons of the year, it is one of the best flowering shrubs that can be planted.

PALMS

Nothing makes our Southern towns more invitingly tropical, especially in the eyes of our Northern visitors, than the Palms, at home in our mild climate. Lofty palms lining an avenue suggest stability and dignity. A careless grouping of palms with other evergreens makes for an effect of luxuriance than nothing else can create.

Every home can have a few Palms. They enhance property value and are the greatest asset in beautifying. On small grounds, they will thrive where other trees will not, because their root systems do not require much space.

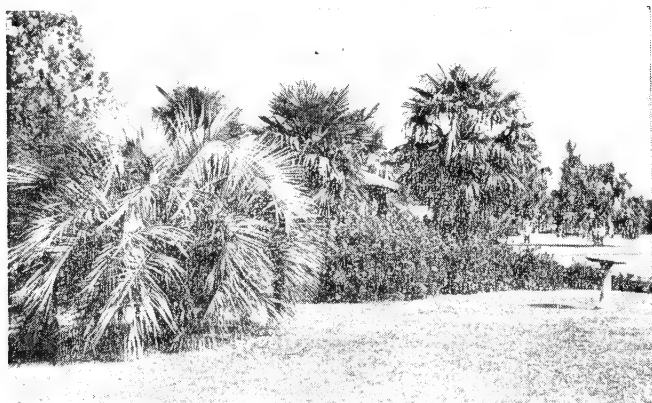

Sabal Palm—Hardest Variety

BLACKBURN PALMETTO Palm Sabal Blackburniana

Fan-shaped leaves, brown trunk; hardest of all Palms, can stand almost zero temperature.

VINES-All Kinds Listed Here

A Vine covered pergola makes a worthwhile addition to any garden. A careful study of your grounds will show immediately where Vines can be used to achieve beautiful effects. Be sure to make the right selection for the spot, as some vines and creepers will thrive better than others, and color harmony is an important feature.

Do not allow your vines to cover entirely a well designed doorway or window. Let them frame the good features of the house and cover its architectural defects. Training or trimming should be shrewdly done to keep the naturalistic effect, which vines give to a house planting.

Live Oaks are Everlasting!

The Shade Tree of the South, nothing can compare to the MAJESTY of the OAKS—because of their LONGEVITY, everlasting beauty and RAPID GROWTH, the Oaks are now preferred to all other Shade trees.

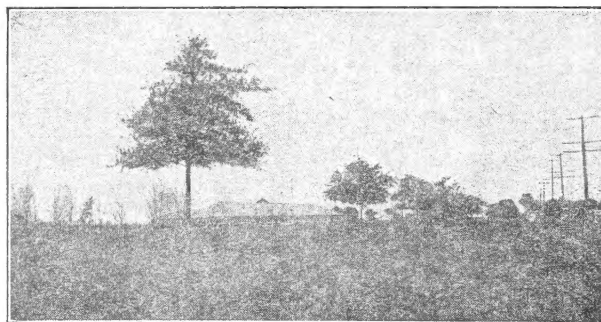

SPANISH LIVE OAK—THE SHADE TREE OF THE SOUTH

THE HUNT FOR A FAST GROWING TYPE OF LIVE OAK

For many years we have strived to develop a type of Evergreen Live Oak tree which we could recommend to our customers as far superior to any known Shade tree, and which was an evergreen, rapid growing, and of a lasting variety. We finally found such a tree several years ago, the tree which we had longed for, a special strain of the Evergreen Live Oak, which was of Spanish origin, rich glossy green foliage, very fast growing, and excellently shaped from small tree to larger Specimens. We immediately obtained stock of the trees and began to grow them in our Nurseries for our customers.

TODAY WE HAVE THOUSANDS OF TREES

After planting in our fields the first trees, we have continued to increase the quantities propagated each year until now our demands run so heavy on this fast growing tree, that we plant thousands of them each year. The

more we furnish our customers each year, the more we are called on for another year, consequently we keep up our stock with annual plantings as the various size trees are dug and sold each season.

OUR B&B LIVE OAK TREES LIVE AND GROW

We pride our experience very highly in the success we have had in developing perfect results in transplanting B&B Live Oaks from our fields. We select the right type of soil on which we grow the trees, developing good fiborous roots, and dig the trees with good solid balls of earth, securely wrap and tie when necessary; and prune the tops as we consider necessary, and in this way, our customers receive 100% results in transplanting

The trees begin new growth immediately after planting, and develop rapidly afterwards. Some customers receive four feet of new growth the first year. A selection of sizes available for this season are shown in this Catalog, with prices according to size and quality.
